

Volton CRM — Super Admin Guide

For: the **owner / super admin** (and admins). Website: <https://volton-crm.vercel.app>

You set up the company once (sources, numbers, hours, people). Managers run the day. You check health, approve big things, and handle privacy requests.

Admins can do everything here **except** adding / removing managers and admins — that is super admin only.

1. Who can do what

Role	Sees	Can
Super admin	Everything	Everything, plus add / deactivate / reset / remove managers and admins
Admin	Everything	All settings, all departments, erase customer data; adds agents, field agents, custom roles
Manager	Own department	Team, lead order, timings, proof review, Sheets, alerts, instructions
Call agent	Own leads only	Accept, call / WhatsApp, save results, quotations
Field agent	Own site visits	Update visits
Staff (custom role, no leads)	Own instructions	Work from Instructions

Departments: **Installation** and **Trading**.

2. One-time company setup — checklist

- ☐ **Company admin** → **Managers & admins** → **Add a manager or admin**: one manager per department. Adding a manager creates that department's team.
- ☐ **Settings** → **Working hours**: Opens / Closes / working days (default 10:00–19:00, Mon–Sat, Pakistan time).
- ☐ **Settings** → **Appearance**: brand colours (applies to everyone).
- ☐ **Settings** → **Meta lead forms**: **Turn on live leads** once; set each form → department (**Save departments**). Use **Fetch leads from Meta** to pull past days.
- ☐ **Settings** → **WhatsApp numbers** → **Connect a WhatsApp number**: "Number already on WhatsApp Business app" (keeps the app working) or "New number". Set **Phone is with** (shared or an employee).
- ☐ **Settings** → **Google Sheets**: connect any Sheet still in use, with its department.
- ☐ Check **Company admin** → **System health** is green.
- ☐ Ask each manager to finish their checklist in the Manager Guide (team, lead order, alerts).

3. What each setting changes

Setting	Where	Effect
Working hours	Settings	Night / holiday leads wait for opening time (unless a team allows night assignment). Follow-up times land inside office hours. Everyone still checked in is checked out 30 min after closing.
Appearance	Settings	Colours for all users.
Meta lead forms	Settings	Live Facebook / Instagram leads; form → department.
WhatsApp numbers	Settings	Chats become leads; replies and proof per number / employee.
Google Sheets	Settings	New rows every minute → leads.
My alerts	Settings	Your own notifications (admins get none until they opt in).
Proof storage	Settings	Screenshot space (Cloudinary free plan 25 GB) and clearing old screenshots.
Lead order & timings	Team (per department)	Who gets leads, accept / first-contact timers, check-in rule, night leads, pause. See Manager Guide §5.3.
Roles	Team	Custom roles: gets leads? gets instructions?

4. Company admin page — what to watch

- **Closes waiting for approval** — managers should keep this near zero.
- **Open leads, Checked in now.**
- **Departments** cards: manager, agents, checked in, open leads, won this month, and **Auto-assign paused** (should normally be off).
- **System health:** Google Sheets, Timers (every minute), Background jobs, WhatsApp API, Meta lead forms, Screenshot storage. Anything red → fix or tell the developer.
- **Recent admin activity:** who changed users, teams and settings.

Weekly checklist

- ☐ System health all green.
- ☐ Closes waiting for approval low in every department.
- ☐ **Leads** → **Leads by employee** for each department: who is behind?
- ☐ **Download Excel report** (Leads page) for the week.
- ☐ Proof storage not near the limit.

5. People

- **Managers and admins:** only you add, deactivate, reset password or remove them (Company admin page).
- **Agents, field agents, staff:** managers and admins add them in **Team** → **Add a team member**.

- **Deactivate** someone who left: they cannot sign in; their open leads go back to the queue and their visits move to others.
- Nobody can deactivate or remove their own account.

6. New roles and Instructions (for teams without leads)

Add a role — Team → Roles → New role:

1. **Role name** (e.g. Installer, Accountant, Store keeper).
2. **Does this role get leads automatically?** Yes = works like a call agent; No = staff, works only from Instructions.
3. **Does this role get work instructions?** Yes if they will be given tasks.
4. **Add role**, then add people with that role in **Add a team member**.

Roles you create are company-wide; a manager's roles belong to their department.

How Instructions work

1. A manager (or anyone) gives an instruction: **To, What needs to be done, Priority** (Normal / High / Urgent), **Due date, Details**.
2. The person gets a phone notification and moves it: **To do** → **In progress** → **In review** (Send for review). **On hold** if blocked.
3. The giver or a manager checks it and marks **Completed**. The employee cannot mark Completed.
4. Every change notifies the other side and is kept in **History**. Late items show **(late)**.
5. **Whole team** view shows everyone's tasks (admins: whole company).

7. Privacy and data

- **Delete a lead** (managers / admins): hidden, history kept — the customer can come back as a new lead.
- **Erase customer data** (admin / super admin only, permanent): lead page → Manage → **Erase customer data (privacy request — permanent)**... → type the last 4 digits of the phone + tick "I understand this cannot be undone". Removes the customer, all their leads, chats, files, visits and quotations. Old copies are never re-imported.
- Public pages for Meta: **/privacy** and **/data-deletion** (linked in the footer).

8. The website (voltonsolar.com) connection

The CRM and the website share **products** and **logins**:

- **Products**: the CRM reads the website's active products (panels, inverters, batteries) for the quotation builder. Nothing is copied — the website stays the one place to edit products and prices.
- **Logins**: CRM users sign in to the website admin with their CRM username / password, or with the **Website admin** button in the CRM. The website asks the CRM whether the password is right and what the person may do.

- **Access levels:** Website admin / Website editor / No website access — set per person in **Team** → **Add a team member** → **Website** (defaults in the Manager Guide §11.3).
- **Website security (fixed with this change):** the website admin now really checks passwords, every change on the website needs a signed-in admin or editor, and the old "seed" link that could wipe all products is switched off.
- **Team page:** the website can read the team list (name, job title, department, who they report to) from the CRM for its Team page. No phones or emails.

One-time setup (developer / super admin)

- ☐ The same secret **WEBSITE_SSO_SECRET** is set in Vercel for **both** the CRM and the website.
- ☐ CRM (Vercel): **MAIN_SITE_MONGODB_URI** (website database) and **WEBSITE_URL** = <https://voltonsolar.com>.
- ☐ Website (Vercel): **CRM_URL** = <https://volton-crm.vercel.app> and a strong **JWT_SECRET**.
- ☐ Change the website database password after setup and update it in both places.
- ☐ Old website-only admin accounts keep working (their password is now checked). Remove the ones nobody uses.

9. When something goes wrong

Problem	Check
No new Facebook / Instagram leads	Settings → Meta lead forms status; System health.
A Google Sheet stopped	Settings → Google Sheets → the tab shows the problem; fix the column and press Use new columns from now .
Leads pile up unassigned	Dashboard queue panel reason: nobody checked in / auto-assign paused / no agents in the order.
WhatsApp messages not arriving	Settings → WhatsApp numbers status; System health → WhatsApp API.
Push notifications not working	The server needs the WEB_PUSH keys (developer). Users must tap Turn on phone / PC notifications .
